

ANNUAL MOORAGE REVENUE SUMMARY - - 2023

Document	CHD-FIN-2023-012
Date	December 15, 2023
Prepared by	L. Brasher, Finance Manager
Distribution	Commission (annual report); Harbormaster

1. OVERVIEW

Moorage revenue for fiscal 2023 was \$4,118,442, against a budget of \$4,051,000 (+1.7%). Occupancy averaged 96.6 percent across the five basins. The first full year of the Resolution 2022-06 rates (\$10.40 covered, \$7.55 open, per foot-month) accounts for the increase over the 2019 schedule.

2. REVENUE BY BASIN AND CLASS

Ledgport (260 covered slips): \$1,102,755. Vessbank (240 covered slips): \$1,001,632. Eastwey (240 open slips): \$706,944. Gullwing (230 open slips): \$688,401. Salmonberry (210 open slips): \$618,710. The covered basins contributed approximately 51 percent of moorage revenue from 42 percent of the slips, reflecting the covered rate premium on the foot-month basis.

3. FOOT-MONTH STATISTICS

Billed foot-months for the year totaled 470,120. Average billed length was 33.7 feet in the covered basins and 41.0 feet in the open basins. Annual and semi-annual prepayments accounted for 31 percent of billed foot-months, the remainder monthly. The prepayment allowance cost the District \$52,904, consistent with the rate study estimate.

4. ANCILLARY REVENUE

Guest moorage \$141,208; metered electricity \$212,690 (recovery of 96% of cost); liveaboard surcharges \$71,060; parking permits \$18,240; waiting-list fees (applications and renewals) \$233,150; miscellaneous service charges \$34,112. Ancillary revenue totaled \$710,460.

5. RECEIVABLES

The year-end receivables balance was \$168,204, of which 4.0 percent was over 90 days. Two terminations for nonpayment were processed under the tariff's payment-order procedure; both accounts were recovered in full before vessel removal.

6. MONTHLY SEASONALITY

Billing is monthly and substantially level, but receipts follow the boating season: collections run ahead of billed revenue from April through October (the regional season) and behind it from November through February, when the guest and electricity lines also fall away. Peak monthly receipts (\$398,412) came in July; the trough (\$296,008) in February. The confirmation mailing drives a December bump in waiting-list fee receipts (\$71,400 of the year's \$233,150 in that line).

7. FOOT-MONTH STATISTICS BY BASIN

Basin	Slips	Class	Avg billed ft	Billed foot-months	Revenue
Ledgport	260	Covered	31.9	99,510	\$1,102,755
Vessbank	240	Covered	32.4	90,144	\$1,001,632
Eastwey	240	Open	39.8	99,102	\$706,944
Gullwing	230	Open	41.4	95,818	\$688,401
Salmonberry	210	Open	43.0	85,546	\$618,710
Total	1180		37.5	470,120	\$4,118,442

The covered basins' higher rate per foot-month more than compensates for their smaller average vessel: covered revenue per slip averages \$4,204 against \$2,966 for open slips. The Salmonberry fleet is the District's largest by average length (43.0 ft billed), reflecting the 60-80 ft rows at the basin's north end.

8. COMPARISON TO 2022

Moorage revenue grew 4.9 percent over 2022 (\$3,925,118). The components: the August 2022 rate action (+5.6% covered, +6.3% open, annualizing), +0.4 points of occupancy, and mix (four 45-50 ft open slips returned to service from maintenance). Excluding the rate action, underlying revenue was essentially flat -- the harbor is full and revenue growth is a rate question, not a volume question, which is the rate study's central observation.

9. WAITING-LIST FEE REVENUE

Waiting-list application and renewal fees totaled \$233,150: 2,862 renewals at \$75.00 and 186 new applications at \$100.00. Renewal count is down 1.8 percent on 2022, consistent with a list that sheds marginal applicants as the covered-basin wait lengthens past eleven years. Fee revenue funds waiting-list administration (confirmation mailing, register maintenance, counter staffing allocation) with the balance to the moorage reserve.

10. EXPENSE CONTEXT

For the Commission's revenue discussion: harbor operating expense for 2023 was \$3,911,640, of which payroll and benefits \$2,208,444, utilities \$486,220, maintenance and supplies \$612,090, insurance \$204,118, professional services \$188,340, and other \$212,428. Moorage and ancillary revenue of \$4,828,902 produced an operating surplus of \$917,262 before capital transfers, of which \$700,000 was transferred to the moorage reserve (including the Salmonberry float replacement accrual).

11. FORWARD LOOK

The 2024 rate study (presented to the Commission 12 November 2024) recommends holding rates flat for 2025 and revisiting the covered/open differential after the state performance audit completes. Management concurs: occupancy gives no pricing signal, and the audit's findings may bear on the cost of administering the covered list.

12. RATE CLASS DETAIL

Non-commercial monthly accounts carry 89 percent of billed foot-months. Commercial monthly accounts (31 agreements, mostly Salmonberry and Gullwing) billed 24,412 foot-months at the 1.35 multiplier for \$248,530. Liveaboard accounts (58 approved) pay the liveaboard surcharge of \$95.00 monthly on top of moorage; surcharge revenue \$71,060 as noted. Guest moorage ran 3,412 vessel-nights at the daily rate; the guest floats at Eastwey turned over 1.9 times per week in season. Tribal and complimentary accounts (6) are fee-waived per the tariff and are carried at zero with a memo line.

13. QUARTERLY RECEIPTS

Quarter	Moorage receipts	Ancillary receipts	Total
2023 Q1	\$976,204	\$141,206	\$1,117,410
2023 Q2	\$1,022,415	\$188,340	\$1,210,755
2023 Q3	\$1,055,830	\$231,904	\$1,287,734
2023 Q4	\$1,063,993	\$149,010	\$1,213,003
Year	\$4,118,442	\$710,460	\$4,828,902

Receipts lag billings slightly through Q1 (weather-related office closures and the February purge processing) and run ahead through the season. The Q4 moorage figure includes \$41,208 of annual prepayments for 2024 received in December.

14. FIVE-YEAR TREND

Moorage revenue: 2019 \$3,402,118; 2020 \$3,288,004; 2021 \$3,517,662; 2022 \$3,925,118; 2023 \$4,118,442. The 2020 dip is the pandemic year's guest-moorage collapse and a one-time fee-relief program; occupancy never fell below 94 percent. The 2023 figure is the first full year at the Resolution 2022-06 rates. Over five years the compound growth is 4.9 percent, of which roughly four points is rate action and one point is occupancy and mix.

14-A. BASIN NOTES

Ledgport's revenue per slip is the District's highest (\$4,241) on the strength of full occupancy and the covered premium; the basin turned over 11 slips in the year. Vessbank's occupancy dipped to 95.8 percent in the spring when the Row G float work took four slips out of service for six weeks; the lost foot-months (about 780) are visible in the Q2 receipts and were partly recovered by temporary guest assignments. Eastwey and Gullwing ran effectively full from May onward. Salmonberry carries the largest vessels and the widest receivables tail: three of the six accounts over 90 days at year-end are Salmonberry commercial accounts, all on payment plans.

15. NOTES TO THE COMMISSION

Three matters for awareness rather than action: (1) the 2023 figure includes \$12,204 of one-time credits for the two billed-length corrections described in the billing reconciliation workpapers; (2) the receivables balance is seasonally high at year-end because the December annual prepayments are not yet applied; and (3) the Salmonberry float replacement accrual of \$150,000 was transferred to the moorage reserve in December as budgeted.

16. COST AND REVENUE PER SLIP BY BASIN

Basin	Slips	Moorage revenue	Revenue/slip	Direct cost/slip	Margin/slip
Ledgport	260	\$1,102,755	\$4,241	\$2,204	\$2,037
Vessbank	240	\$1,001,632	\$4,173	\$2,198	\$1,975
Eastwey	240	\$706,944	\$2,946	\$1,740	\$1,206
Gullwing	230	\$688,401	\$2,993	\$1,755	\$1,238
Salmonberry	210	\$618,710	\$2,946	\$1,902	\$1,044

Direct costs are allocated on the cost-center ledger (docks, electricity, water, garbage, security patrols) and exclude overhead and capital transfers. The covered basins' margin funds the open basins' lower margin and the harbor's reserve contributions; that cross-subsidy is a deliberate tariff policy and is why the covered/open differential is revisited at each rate study rather than assumed.
